
a
Gaussian process
Landau (Maxwell)
train
held out
σ_0 (MPa)
Temperature (K)
b
$d\sigma_0/dT$ (MPa K^{-1})
finite difference
Temperature (K)
c
order-parameter channel
elastic channel
$z(T)$
Landau driving function
Temperature (K)
d
range explored by the fit
Reduced stress $s(\alpha)$
α_M
α_C
Reduced coefficient $\alpha = ac/b^2$
